

PROFESSIONAL SUMMARY

Technical Lead with **5 years of experience** building large-scale backend systems at FPT Telecom — a leading Vietnamese telecom operator serving millions of broadband subscribers.

Designed and operate **Notification Hub**, a centralised notification platform processing **~5 million messages per day**. Currently **Tech Lead of Channel Hub**, a marketing content distribution platform integrating **6 channels** (Facebook, Zalo, ZNS, Email, SMS, HiFPT).

Deep expertise in **.NET Core / C#, microservices, event-driven architecture (Kafka) and Kubernetes**. Strengths: high-throughput system design, SLA and performance tuning, large-scale legacy refactoring, and production incident handling on critical-path infrastructure (RADIUS, MAS).

Apply **AI-assisted development** (Claude Code, Cursor) to code review, large-scale refactoring and codebase analysis — measurably shortening the team's delivery cycle.

TECHNICAL SKILLS

Languages	C# (.NET Core / .NET 6-8), TypeScript / JavaScript, PHP, Ruby, SQL
Backend	ASP.NET Core Web API, NestJS (Node.js), Microservices, Domain Events, Repository Pattern, Dapper, EF Core, AutoMapper, REST APIs
Frontend	React, HTML, CSS
Messaging & Cache	Apache Kafka, Redis
Databases & Storage	SQL Server, MongoDB, MySQL, MinIO, Elasticsearch
DevOps & Infra	Kubernetes, Docker, API Gateway, CI/CD, Grafana, Kibana, Load Testing
Architecture & Ops	Microservice design, SLA & throughput tuning, memory-leak debugging, production incident response
AI-assisted Dev	Claude Code, Cursor — code review, large-scale refactoring, test generation, codebase analysis

PROFESSIONAL EXPERIENCE

FPT TELECOM JOINT STOCK COMPANY — March 2022 - Present

Technical Lead (2025 - present) · Team Lead (2024 - 2025) · Software Engineer (2022 - 2024)

- Channel Hub — Tech Lead** (in development)

Platform connecting the internal CMT tool to external communication channels, distributing marketing campaign content across FPT Telecom's customer base.

 - Own the end-to-end system architecture:** designed a *channel adapter* contract allowing new channels to be onboarded without modifying the core.
 - Integrated **6 channels**: Facebook, Zalo, ZNS, Email, SMS and HiFPT.
 - Lead the engineering team: technical decisions, architecture reviews, pull-request reviews and technical roadmap.

Stack: .NET Core, Microservices, Kafka, Redis, MongoDB, Kubernetes, API Gateway, React.
- Notification Hub — Team Lead**

Company-wide shared platform centralising and synchronising all customer-facing notifications at FPT Telecom.

 - Architected and delivered a system processing **~5 million messages per day**.
 - Exposed a **shared API** allowing internal applications to send and **schedule automated notifications** to customers; currently serving the ZNS channel for the Marketing system.
 - Applied **Domain Events + Kafka** to decouple producers from consumers, guaranteeing delivery and enforcing idempotency to prevent duplicate sends.
 - Tuned Redis caching and Dapper queries to sustain stable throughput under peak load.
 - Led the team: task breakdown, pull-request reviews, coding-convention standardisation.

Stack: .NET Core, Kafka, Redis, MongoDB, SQL Server, Kubernetes.
- MobiMap-VN — Team Lead**

Mobile application for looking up and operating the network port-map infrastructure layer.

 - Led the **migration of the infrastructure to Kubernetes**: containerised services, configured deployments and auto-scaling, standardised the release process.

Stack: .NET Core, Kubernetes, Docker, API Gateway.
- MAS — Monitoring & Alerting System**

Proactive monitoring platform for internet services and network infrastructure.

 - Built the pipeline for **data collection → performance analysis → anomaly detection → automated alerting** to operations teams.
 - Enabled earlier fault detection, reducing service downtime and shortening MTTR.

Stack: .NET Core, Kafka, Redis, Elasticsearch, Kubernetes.
- RADIUS — AAA System for FPT Telecom Broadband**

Authentication / Authorization / Accounting for broadband subscribers — a critical-path system where any incident directly disconnects customers from the internet.

 - Built, developed, monitored and **automated configuration via a Telegram bot** for RADIUS business operations.
 - Operated a high-SLA system with direct responsibility for production incident response.

Stack: .NET Core, SQL Server, Redis, Telegram Bot API.
- IAM — Identity & Access Management**

Centralised user authentication service across FPT Telecom's internal systems.

 - Implemented centralised authentication (SSO / OAuth2) and standardised access authorisation across applications.

Stack: .NET Core, SQL Server, Redis, API Gateway.

Reinvent Inside Programme — Contract & Customer

- **Customer Contract:** built the electronic-contract creation module for FPT Telecom.
- **Customer Information:** customer master-data management module.
- **Common eContract:** shared electronic-contract generation service.
- **E-Invoice:** owned the **e-invoice reading and parsing module**, processing inbound invoice data.

Stack: .NET Core, MinIO, SQL Server, MongoDB, Kafka.

ErrorSystemCheckList & AUTO-CHECKLIST

Systems generating incident checklists for the TIN/PNC technical support teams during network outages.

- Replaced manual checklists with a **rule engine that auto-generates checklists** per network-incident type, cutting technical teams' handling time.

Stack: .NET Core, SQL Server, Redis.

Early Projects (2022)

SO ACS · ACS 3.0 · ACS Tool Cronjob · Informative Portal V1.0 · FPROJECT V4.3 — feature development and maintenance for wifi-device management systems and an automated billing-reminder portal.

Stack: PHP Laravel, Ruby on Rails, .NET Core 5, MySQL, Kafka, Redis, Elasticsearch, Docker.

EDUCATION

Saigon University of Technology (STU) — October 2018 - October 2022

B.Sc. in Information Technology · Graduated with Distinction (Good)

LANGUAGES

Vietnamese (Native) · English (Professional working proficiency — technical reading & writing)
